

Set Up a Public Display of a SolarEdge Site Dashboard in the Monitoring Platform - Application Note

Revision History

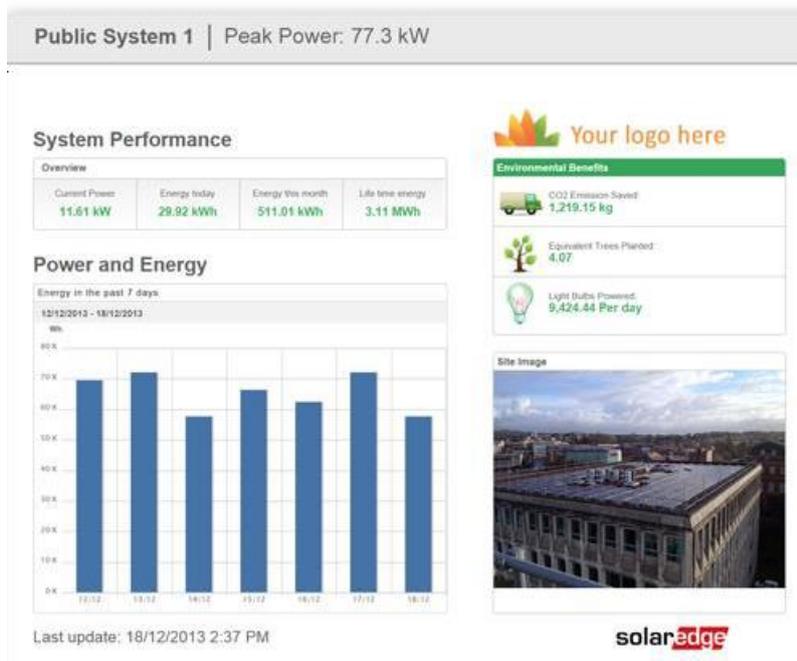

- Version 2.0, December 2023: Updated GUI and content
- Version 1.0, April 2022: Initial release

Overview

This application note describes how to set up a live view of the SolarEdge Monitoring platform for display in a public space, for example, the lobby of a public building. Live view allows system owners to share their site's PV performance with visitors through a public web address. It updates every 5 minutes and displays the site's power and energy production, environmental benefits, installer logo, and site image. It is optimized for screens with a 16:9 aspect ratio.

The display language is automatically updated according to the device's location and its local settings and can be changed manually.

The following image is an example of a public display.

Set up a Kiosk View

To set up a Kiosk View for the site:

1. Log in to the [Monitoring Platform](#).
2. To access your site, click the **Site Name**.
3. Click the **Admin** view.

Set Up a Public Display of the SolarEdge Site Dashboard in the Monitoring Platform - Application Note

4. From the **Admin** menu, click **Site Access**>**Access Control**.

Cancel Save

5. In **Kiosk View**, select the **Create a link for public area display** checkbox.
6. **Optional.** In the **Site Display Name** field, edit the **Site Display Name**. This name replaces the site name on the public screen display.
7. Click **Save**. Your URL address is activated and displayed in the **Kiosk Address** field.
8. Click **Copy**. You can now paste the URL address into a browser, to display on a public screen.

To set up a Kiosk View on a display device:

1. Mount a screen for public display. The screen should either be connected to a computer or streaming device or have direct internet connectivity, such as a Smart TV. For more details, see [System requirements](#).
2. Open a browser and paste the site's URL address. The site's kiosk dashboard is displayed on the screen.
3. Press **F11** to enable a full-screen display.

System requirements

Public display supports various devices including computers, tablets, and smart TVs. It is recommended you use devices that can be upgraded to newer browser versions and to use standard browsers such as Chrome, Mozilla, Safari, Opera, and Internet Explorer, which are periodically tested by SolarEdge.

The following are the minimal system requirements for a public display:

- Device screen resolution: min. 1024x768 pixels
- Internet connection
