

Inverter Installation in Saline Environments - Declaration

SolarEdge inverters can be installed at a minimum distance of 50m from the shoreline of an ocean or other saline environment, as long as there are no direct salt water splashes on the inverter.

The inverter warranty, and any warranty extension that has been purchased, remains valid for inverters installed in saline environments in the manner described above and does not cover inverters installed in closer proximity to the shoreline or that have been exposed to direct salt water splashes.
