Power Optimizer

For North America

P400 / P401 / P485 / P505

PV power optimization at the module level

- Specifically designed to work with SolarEdge inverters
- High efficiency with module-level MPPT, for maximized system energy production and revenue, and fast project ROI
- Superior efficiency (99.5%)
- Mitigates all types of module mismatch losses, from manufacturing tolerance to partial shading
- Flexible system design for maximum space utilization

- Fast installation with a single bolt
- Next generation maintenance with modulelevel monitoring
- Meets NEC requirements for arc fault protection (AFCI) and Photovoltaic Rapid Shutdown System (PVRSS)
- Module-level voltage shutdown for installer and firefighter safety

/ Power Optimizer For North America

P400 / P401 / P485 / P505

Optimizer model (typical module compatibility)	P400 (for 72 & 96-cell modules)	P401 (for high power 60 and 72-cell modules)	P485 (for high-voltage modules)	P505 (for higher current modules)

Output Wire Type / Connector	Double Insulated / MC4						
Output Wire Length	1.2 / 3.9						
Operating Temperature Range ⁽⁵⁾	-40 to +85 / -40 to +185						
Protection Rating	IP68 / NEMA6P						
Relative Humidity		0 – 100					

(1) The rated power of the module at STC will not exceed the optimizer Rated Input DC Power. Modules with up to +5% power tolerance are allowed.

(2) NEC 2017 requires that the maximum input voltage not be more than 80V.

(3) For other connector types please contact SolarEdge

(4) Longer input wire lengths are available for use. For 0.9m input wire length order P401-xxxLxxx.

(5) For ambient temperatures above +85°C / +185°F power de-rating is applied. Refer to the Power Optimizers Temperature De-Rating Technical Note for more details.

(6) It is not allowed to mix P485/P505 with P400/P401 in one string.

(7) A string with more than 30 optimizers does not meet NEC rapid shutdown requirements, safety voltage will be above the 30V requirement.

(8) For the 208V grid, it is allowed to install up to 6,500W per string when the maximum power difference between each string is 1,000W.

(9) For 277/480V grid, it is allowed to install up to 15,000W per string when the maximum power difference between each string is 2,000W.
